DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3 November 2009 has been entered.

Response to Amendment

Applicant's amendment filed 3 November 2009 has been entered. Claims 1, 2, 11, 21, 31 have been amended. Claims 1-23, 26-27 and 30-44 are still pending in this application, with claims 1, 11, 21 and 31 being independent. Please note that AU 2416 has been changed to AU 2747.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Leon R. Turkevich (Reg. No. 34,035) on 18 December 2009.

The application has been amended as follows:

In the claims:

41. The method of claim 1, wherein the detecting of the change in at least one of the prescribed attributes of the active path is based on [[a]] detecting a change in a link attribute in any one of the first active link or the second active link, the change in the link attribute distinct from availability of the corresponding active link.

42. The router of claim 11, wherein the detecting of the change in at least one of the prescribed attributes of the active path is based on [[a]] detecting a change in a link attribute in any one of the first active link or the second active link, the change in the link attribute distinct from availability of the corresponding active link.

43. The medium of claim 21, wherein the detecting of the change in at least one of the prescribed attributes of the active path is based on [[a]] detecting a change in a link attribute in any one of the first active link or the second active link, the change in the link attribute distinct from availability of the corresponding active link.

44. The router of claim 31, wherein the detecting of the change in at least one of the prescribed attributes of the active path is based on [[a]] detecting a change in a link attribute in

Art Unit: 2474

any one of the first active link or the second active link, the change in the link attribute distinct from availability of the corresponding active link.

In the Specification:

Replace the Paragraph beginning at page 13, line 1 with the following replacement paragraph:

Figure 8 is a diagram illustrating the method of sending an EIGRP update message in response to detecting a dynamic attribute change in an active path, according to an embodiment of the present invention. The steps described herein with respect to Figure 8 can be implemented as executable code stored on a computer readable medium (e.g., floppy disk, hard disk, EEPROM, CD-ROM, etc.), ~~or propagated via a computer readable transmission medium (e.g., fiber optic cable, electrically conductive transmission line medium, wireless electromagnetic medium, etc.).~~

3. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to, either alone or in combination with one another, disclose each and every limitation of the claims. In particular, the prior art fails to teach that an active path is defined as including at least a first and second active links each terminated by the router and connecting the router to a first neighboring router that terminates the first and second active links, and that the first and second active links are each configured for sending or receiving Internet Protocol (IP) packets.

Previously cited reference to Grover et al. (US 6,377,543) discloses a distribution network in which a circuit switching configuration includes multiple parallel circuit links each terminated by neighboring switches. However, Grover is directed to a Digital Crossconnect system and not an Internet Protocol packet switching system. Since the claims recite that the active links send or receive IP packets, Grover does not teach that the first and second active links are each configured for sending or receiving Internet Protocol (IP) packets.

Newly cited reference to MacFarlane et al. (US 6,516,348) discloses a method for displaying capacity information of computer resources, the capacity being monitored and displayed can be an aggregate of multiple parallel WAN connections. In this case, the end user can monitor the total bandwidth available across multiple simultaneous connections. However, the user is monitoring the prescribed attributes of the active path (which MacFarlane reads as bandwidth); whereas the claim explicitly recites that the router is monitoring the prescribed attributes of the active path. Therefore, MacFarlane does not teach this limitation.

Grover, MacFarlane, and the other prior art of record, neither alone nor in combination, teach each and every claim limitation. Therefore, the claims as currently amended are allowable over the prior art of record.

Claims 21-23, 26-27 and 30 are directed toward a computer readable storage medium. The Specification (after Examiner amendment above) limits the computer readable storage

Art Unit: 2474

medium to floppy disk, hard disk, EEPROM, and CD-ROM and does not include any transitory medium types. Therefore, with the inclusion of only non-transitory media in the definition of computer-readable storage medium, the claim satisfies the statutory requirement for 35 USC 101.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Curtis A. Alia whose telephone number is (571) 270-3116. The examiner can normally be reached on Monday through Friday, 9am-6pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Aung S. Moe can be reached on (571) 272-7314. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
